

## FLEET CONTRACT/JOB PROCESSING/BOOKING

Fast, Easy to use but sophisticated product for all types of processing - logistics, survey, utilities, engineering etc. Save time by automating job data input from customers by file transfer or web interface. Mandata /Road Runner? Want something better, faster and at less cost?

FLEET has comprehensive reporting and produces Invoices that Integrates with Sage or other Accounting systems.

## FLEET MAPPOINT PLAN & ROUTE

If you use MapPoint as part of your tools for planning and routing, then take a serious look at this product that can reduce the time taken to a fraction and with a very simple process. Jobs can be manually input, picked from collection/delivery notes, from FLEET job processing or from integrating into an existing system. FLEET MapPoint Plan & Route produces manifests and can send jobs to mobile worker devices.

## FLEET WHITEBOARD PLANNING

Use this Easy to use drag and drop system to considerably reduce your allocation planning time for jobs to vehicles and drivers. The system can automatically allocate according to your rules or use third party optimisation products. Once optimised, jobs are displayed in columns against allocated vehicles/drivers. This leaves the planning personnel to concentrate on exceptions

## FLEET WHITEBOARD REAL TIME MONITORING + OLAP REPORTING

Having Planned using the whiteboard or the FLEET Mappoint Plan & Route, monitor the progress of jobs with indications of jobs complete, problems, loaded weight, temperature etc., provided you have mobile worker and tracking.

Real time planning can then be actioned on the basis of real time data allowing the planner to substitute or re-allocate as required. FLEET has comprehensive standard reporting and user defined FLEET OLAP Reporting

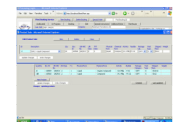

## FLEET MOBILE WORKER & FLEET CAMERA

FLEET Mobile worker can have any mobile application designed for it provided the device can support it. FLEET has no limitations of web based products which generally allow only a simple form design. Mobile systems are designed for a variety of applications, for any industry, and can have functionality such as signature capture, barcode scanning, RFID, camera, video, audio. Mobile devices include PDA's, rugged PDA's, UMPC's.

## FLEET BARCODE AND TRACABILITY

FLEET Mobile worker can incorporate barcoding systems for product and delivery traceability. Typical systems allow the products/containers to be scanned at locations and related to time and map reference point. MSA provides a Web based interface for customers to enquire on the traceability of products or containers as this is critical in certain industries such as isotope transport.

## FLEET TRACKING + GEO FENCING. FLEET TELEMATICS + WEIGHING

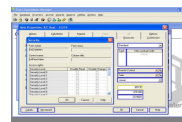

FLEET Tracking utilises the right product for the requirement. Web Tracking or Tracking back to Mappoint etc., are available with a variety of GPS tracking devices. Web mapping or Mappoint can be used for GEO fencing to show when a vehicle has left an area for example. Telematics can be incorporated for monitoring levers or weight of the vehicle. Tracking information can be directly related to job information that can be shown on a tracking map.

## FLEET WIRELESS WAREHOUSE MANAGEMENT AND STOCK CONTROL

FLEET integrates the process of wireless networks by incorporating warehouse management and stock control. FLEET has SOP and POP capability for picking and put away as additional functions.

This is essential for a joined up process of orders, picking, delivering, goods in and put away when there is interdependence of LAN wireless warehouse systems and WAN GPRS delivery systems.

## FLEET AIRTIME SOLUTIONS

It is essential for the fast developing world of mobile working and communications to get the right solution for all your telecoms needs under a flexible and dependable service provision. Just as hardware, software, telephones and mobile communications integrate together, so should the telecoms package. MSA provides a service that analyses communication requirements with recommendations where required.
